## Build your own Internet

This 2/3 day bootcamp offers an opportunity to learn more about the world of network building and web design. The topic is taught from an entrepreneurial approach, encouraging participants to consider technical setup, design and implementation of a business' website and developing a business concept as a group. Understanding how networks are built and connected is essential to understand fully how to get your business online, this workshop offers participants a chance to build their confidence and understanding of how the internet works, how a network is built and connected and how to develop your own webpage using HTML (Hypertext Markup Language).

- Build and connect a network

### Why Technocamps?

Technocamps is an exciting project that provides free workshops to young people on programming, robotics, game design, app development and much more... It is about getting young people (11-19) in Wales excited about Computer Science and STEM and challenging them to think about the world around them in a different way.
